

Research & Development Engineer (entry level)

COMPANY INFORMATION:

Plibrico Company is a full service refractory company that provides refractory materials, engineering, and construction services. The company services a wide range of industries including steel, aluminum, chemical, utility, incineration and sugar to name a few. We have been in business for 90+ years and have a strong brand name and loyal customer base. The company manufactures a complete line of monolithic refractories (refractory plastics, castables and gun mixes) in Ohio, has five construction offices throughout the United States and is headquartered in Chicago. We also support the sales and construction efforts of 16 independent distributors throughout North America and the Caribbean.

JOB DESCRIPTION:

Primary responsibilities will include monolithic refractory product development, modification and improvement, technical service support for the sales/construction force, field performance analysis, and refractory system research. This position will report to the Vice President of R&D and will be based at the corporate office / R&D laboratory in Chicago, Illinois. We offer a competitive salary and benefit package.

QUALIFICATIONS:

- *Bachelors degree in Ceramics or Material Science.*
- *Excellent problem solving skills, with an emphasis on innovative and creative solutions.*
- *Strong analytical skills and knowledge of ceramic processes*
- *Excellent communication skills, both orally and written*
- *Must be willing to travel ~10% of the time with some overnight travel required.*
